Hikvision
Temperature Screening Solution
Flexible Product Choice for a Multitude of Scenarios

Hikvision Temperature Screening Solution, with multiple product types and wide range of applications, is designed for the detection of skin-surface temperatures so as to achieve rapid and safe preliminary screening in public areas with high efficiency in a multitude of scenarios.

- Thermographic Cameras
- MinMoe Terminals
- Metal Detector Door
- DeepinMind NVRs

Pain Points of Conventional Methods

Conventional methods – such as using an ear thermometer or mercury thermometer – have obvious deficiencies in detecting people with abnormal temperature in public places:

Close Contact, High Risk
Close contact among the users leads to potential risks.

High Cost, Low Efficiency
Increased manpower required, but 1-by-1 inspection is inefficient.

Lack of Intelligent Analysis
Manual registration is required, which may lead to human error and not so timely feedback.

We Offer a Better Approach

An approach that incorporates competent technologies, instead of manpower alone, can be a much better choice in many ways. Such an approach is:

Safer
Non-contact measurement to avoid physical contact

Faster
One second per person for skin-surface temperature detection

Smarter
AI detection, greatly reducing false alarms

Advantages
of Thermal Technology

- AI technology ensures thermographic cameras only detect human skin-surface temperature to reduce false alarms of other heat sources.

- Compensation algorithm ensures the temperature is compensated with ambient temperature and the distance of the measured target for better accuracy.

- Thermal technology has been applied widely in temperature screening scenarios as it offers more flexibility and efficiency in preliminary screening of elevated skin-surface temperatures.
